Dr. ANGELITA D. GUIA
Dean, College of Engineering
University of the East
105 Samson Road, Caloocan City, Philippines

Dear Dean Guia:

We are the 3rd-year students of the University of the East - Caloocan, taking up a Bachelor of Information Technology under the Department of Computer Studies and Systems in the College of Engineering (CENG'G). We would like to seek your endorsement as we perform data gathering for our research titled **"Integration of Web-App Platforms for Smart Gym Membership, Inventory, and Personalized Fitness Guidance"**.

Through this study, we hope to identify efficient digital solutions that can smoothen the processes, reduce manual operations, and improve service quality for admin, staff and members. The data for this research will be collected through an online survey using Google Forms. The questionnaire will be distributed to gym members and staff. Participation will be voluntary, and all responses will be kept confidential and used strictly for academic purposes. The results of this study are expected to provide practical recommendations that can support Fit-Stop Gym in digitizing its operations and enhancing overall experience.

Sincerely,

CHRISTIAN KEVIN A. BARRETTO	CARILLO, CHARLES JUSTINE C.
LANCE ANDRE O. CHUA	STEFEN RYLE S. RANQUE
SHARIEN MAE H. SALARDA	

Noted by:	Signed:
Dr. Sheila A. Abaya Thesis Adviser	**Dr. Angelita D. Guia** Dean, CENG'G

We are the students of the University of the East - Caloocan, 3rd year students taking up a Bachelor of Information Technology, under the Department of Computer Studies and Systems in the College of Engineering(CENG'G), who are currently taking the Capstone Project and Research 1 (CPP 4980) subject as the initial stage of our software project. We would like to seek participation in our research titled **"Integration of Web-App Platforms for Smart Gym Membership, Inventory, and Personalized Fitness Guidance"** by answering the attached survey.

Please take the time to read the details of our study.

1. *Purpose of the study:* Our research aims to lessen the use of manual paperwork by developing a web-app-based application to enhance the management of membership, inventory, and fitness services at Fit-Stop Gym. It will be used by the admin, staff, members, and walk-in clients. and bring automation for the simplification of the relevant operations. In addition, the system actually gives real-time monitoring, especially for the admin to track the stocks and inventory of sales every day. The staff can work efficiently and smoothly through checking attendance using QR code and direct log to the system without the use of pen and paper, Also for the members can track their plan and personal fitness journey with the help of AI.
2. *Procedure:* As a respondent, you will be asked to accomplish a pen-and-paper questionnaire / electronic form that may include personal and sensitive information.
3. *Confidentiality:* All collected information will be used for academic and research purposes only and will be handled with the utmost confidentiality. The presentation of results will be in the form of aggregate information and will not identify a specific individual. Collected information in soft and hardcopy formats will be disposed of after printing the final manuscript.
4. *Right to Decline:* Your participation is voluntary and you have the right to decline or withdraw at any time.
5. *Questions and Concerns:* We are open to answering any questions or concerns. Please contact us.

Consent Form

"By signing this form, I agree to be a respondent to this study. I give my consent in the processing of my information collected from the provided questionnaire for academic and research purposes."

NAME:	**ERIC**	**ENRIQUEZ**
	Given Name	Surname

STUDY DESCRIPTION	
Research Proposal Title	**Integration of Web-App Platforms for Smart Gym Membership, Inventory, and Personalized Fitness Guidance**
Brief Description Describe the background, methodology, rationale/significance, hypothesis/research questions, dissemination plan, and the expected outcomes. (use additional sheet if necessary.)	**This study proposes developing an Integrated Web App Platform for Smart Gym Membership, Inventory, and Personalized Fitness Guidance. The research focuses on replacing inefficient, paper-based administrative workflows with an automated system featuring QR code-based check-ins, real-time inventory tracking, and a centralized management dashboard. By transitioning to a digital infrastructure, the system aims to eliminate data inconsistencies and operational bottlenecks, allowing for more accurate tracking of membership status and sales while empowering administrators with the data-driven insights necessary for strategic decision-making.** **Beyond administrative automation, the study integrates an AI-driven personalization layer to bridge the gap in member engagement and loyalty. By offering digital tools for real-time progress monitoring and customized**

	workout and meal plans, the platform transforms the member experience from a simple transactional relationship into a data-driven fitness journey. **This dual approach, combining operational efficiency with AI-powered health guidance, positions the gym to meet modern industry standards, fostering better health outcomes for users and long-term sustainability for the business.** **The expected outcome of this study is the deployment of a centralized, AI-enhanced web platform that eliminates manual administrative bottlenecks through automated membership and inventory tracking. By integrating QR code check-ins and personalized AI fitness guidance, the system will provide administrators with real-time operational insights while significantly increasing member engagement and retention.**	
Study Duration *(from proposal to deployment)*	**From** (start date)	**August 07, 2026**
	To (end date)	**November 19, 2026**

Respondents / Research Participants:		
Use of special populations or vulnerable groups:		
[ ]	Children (under 18 years old)	
[ ]	Elderly (above 60 years old)	
[ ]	Indigenous people	
[ ]	People on welfare/social assistance	
[ ]	Displaced persons	
[ ]	Others (Please indicate):	
[X]	Not applicable
